Hello Subsplash Team,

I'm a web developer with a background in computer science, and I have strong experience developing single-page applications with a React.js and Redux frontend with a Rails and PostgreSQL database backend. Painting, crafting, and dance have shaped my entire life; I grew up influenced by various forms of art, and have seen the influential effect of diverse creations on family and friends. I demonstrate the same high quality of creativity and innovation in my code as I do in my arts, and I believe my skill-set and experience can help Subsplash expand the overall user experience.

I am passionate about creating software that is clean, beautiful and interactive, which I demonstrate in my latest project, Happeningbrite, an event promoting platform based on Eventbrite. I had the sole responsibility of developing the entire application, with particular attention paid to the front end and user experience design. I achieved smooth transitions and responsive design through integrating the server- and client-side using a RESTful API and React.js. Multiple event listeners give users numerous control methods, which result in allowing users to create, view, and edit events, save events, purchase event tickets, and filter events by Category and Event Type.

Please visit my [LinkedIn](#), [GitHub](#), and [portfolio](#) if you'd like to see more of my current and past projects. Thank you for your time and I look forward to hearing from you soon.

With many thanks,  
Emily
